Program: MSCM*

## THE SCALE CONNECT

From January 13th to 31st we attended the the SCALE Connect event in Boston at MIT university, with four other universities that are part of the MIT scale Network consisting of more than 150 professionals in supply chain services (SCS) from 40 nationalities.

We learned how to use Network design software like Llamasoft. We have attended interviews with different supply chain executives from several industries and went to on-site visits for various companies where we discussed its logistics, inventory, and procurement challenges. We also took classes of Phyton — a tool that allows us to visualize a large amount of data and perform small programs with it.

In the very last week, we presented our thesis project on Total Landed Should Cost for Specialty Chemicals to the SLB team that joined us (from right to left in the picture: Hossam Eldali, Katie Fowler, Gopal Sehgal and MISI's CEO Dr. David Gonzaleves) as well as practitioners on SCS since this event is open not only to students and faculty but also for any industry in general.

It was a unique learning experience and an opportunity to build our network with the best in class SCS specialists. Sang and I returned to Malaysia to finalize our master's degree in Supply Chain at the MISI University. We are more than happy to be able to have this amazing opportunity.
